

Technical Evaluation – Generator Stator Core Monitoring				
Category	Evaluation Criterion	Description (Deliverables)	Evaluation Range Weight (%)	Scoring %
A. Understanding of Scope & Methodology (25%)	Understanding of GCMX Scope	Understanding of inspections, testing, cleaning, replacements, and fault clearing	10	
	Inspection & Testing Methodology	Methodology for inspections, power-up, leak testing, simulations, relay testing	10	
	Recording & Reporting	Recording readings and actions in the Product Quality Plan (PQP)	5	
B. Technical Capability & Equipment (25%)	Tools & Test Equipment	Availability of tools for leak testing, simulations, and electrical tests	10	
	Cleaning & Contamination Control	Use of lint-free rags, acetone, contamination control	5	
	GCMX System Knowledge	Experience with ion chambers, filters, solenoids, electronics	10	
C. Personnel Competence & Experience (20%)	Qualifications	Relevant engineering / technical qualifications	10	
	Relevant Experience	Experience in generator stator core monitoring systems	10	
D. Quality, Safety & Compliance (20%)	Quality Management	Use of PQP, inspection records, test sheets	10	
	Safety & Compliance	Compliance with Eskom / industry safety standards	10	
E. Documentation & Deliverables (10%)	Test Reports & Records	Submission of complete inspection and test results	5	
	Fault Handling & Close-Out	Fault clearing, confirmation of normal operation	5	
Minimum Qualifying Threshold			≥75%	

Kind regards,

Errol Mathebula
